## **Classification Guidelines**

1. The Occupational and Employment Statistics (OES) survey classification covers all employed persons and owners of incorporated firms. It excludes unpaid family workers, owners of unincorporated firms, and occupations unique to volunteers. Each occupation is assigned to only one occupation at the lowest level of the classification.
2. Occupations are classified based upon work performed, skills, education, training and credentials required for the job.
3. Supervisors of professional and technical workers usually have a background similar to the workers they supervise, and are therefore classified with the workers they supervise. Likewise, team leaders, lead workers and supervisors of production, sales, and service workers who spend at least 20 percent of their time performing work similar to the workers they supervise are classified with the workers they supervise.
4. First-line managers and supervisors of production, service, and sales workers who spend more than 80 percent of their time performing supervisory activities are classified separately in the appropriate supervisor category, since their work activities are distinct from those of the workers they supervise. First-line managers are generally found in smaller establishments where they perform both supervisory and management functions, such as accounting, marketing and personnel work.
5. Apprentices and trainees should be classified with the occupations for which they are being trained, while helpers and aides should be classified separately.
6. If an occupation is not included as a distinct detailed occupation in the structure, it is classified in the appropriate residual occupation. Residual occupations contain all occupations within a major, minor, or broad group that are not classified separately.
7. When workers may be classified in more than one occupation, they should be classified in the occupation that requires the highest level of skill. If there is no measurable difference in skill requirements, workers are included in the occupation in which they spend the most time.
8. OES collects data at the detailed occupational level in almost all cases. A few occupations are surveyed at the broad level to ensure enough response in that occupation to support an estimate, and avoid potential problems with secondary disclosure.
